

IdeoneAPI special contest (Stage 2)

Stage 2

At this stage you should create a software solution using the IdeoneAPI as it has been described earlier, in Stage I submission. The submission includes the created solution with a suitable manual. An application project should be sent by the team leader (in the case of several applications the last one is taken into an account) by way of the SPOJ system. The form of an application depends on the project, it might be even just an Internet link.

Submission deadline - Saturday, 17 April 2010, 12:00.
