## Waiting for Easter

Given a date, calculate the number of days until next Easter according to canonical (western) rule using the Gregorian Calendar.

## Input

First line of input is a positive integer $\mathrm{t}<100$, the number of testcases. Each of the following t lines contains a single date ( $1600<$ year<2100). The example below shows the date format.

## Output

For every date print the number of days until next Easter or 0 if it's an Easter date.

## Example

Input:
3
16 April 2011
27 February 1954
7 July 1777

## Output:

8
50
286
