## String manipulation

You are given two strings: str1 and str2. For each successive letter from str2, remove its first occurrence in str1. Do nothing if a given letter from str2 does not exist in str1.

## Input data specification

An integer $t, 1<=\mathrm{t}<=100$, denoting the number of testcases, followed by $t$ lines. Each line consists of two strings separated by a whitespace. Strings consist of lower-case letters from the Latin alphabet. The size of the whole test is limited by 1 MB .

## Output data specification

Output $t$ strings, one string in each line according to the problem specification.

## Example 1

Input:
7
whose shoe
is the
dirty shoe
please go
out and
wash your
dirty shoe

## Output:

w
is
dirty
please
out
wash
dirty

## Example 2

Input:
4
five potato
six potato
seven potato
more potato

## Output:

five
six
seven
mre
Scoring

By solving this problem you score 10 points.
