

Minimal distance

Matt and Filip love to ride a bike. Matt is currently riding west to east at constant speed V_M [m/s], and Filip is riding south to north at constant speed V_F [m/s]. Both of them started riding at the same time, when Matt was D_M [m] before a crossroads and Filip was D_F [m] past the same crossroads. Calculate the smallest distance at which Matt and Filip will be from each other during their ride.

Input

In N ($2 \leq N \leq 60\,000$) lines of standard input there are four integer values V_M, D_M, V_F, D_F ($2 \leq V_M, D_M, V_F, D_F \leq 100\,000\,000$) separated by spaces. In line $N+1$ there are four zeros separated by spaces. Do not process this test case.

Output

Write out N lines to standard output. For each test case, write the minimal distance between Matt and Filip in a separate line. Preserve the order of lines from the input. The relative error of your result shouldn't exceed 0.000001

Example

Input:

17 286 34 139

12 130 9 107

31 309 22 74

38 192 26 73

29 50 27 118

0 0 0 0

Output:

317.96887

163.6

239.180354

168.66674

128.156155

Scoring

For solving this problem you will score 10 points.
