## Easy One For Cartman

Butters thinks he is really smart. So he gave gave three numbers to Cartman, $A B$ and $N$ such that $A$ is the first term of an A.P. (Arithmetic Progression), $B$ is the second term of that A.P. and $N$ is the number of terms in the A.P. Then he asked him to find the sum of all the elements in that A.P. Can you find the sum for him?

## Input

First line will contain "T" the number of test cases. Each of the next $T$ lines will contain three integers $A, B$ and $N$.

## Output

For each test case output the sum of all the elements of the A.P. in a separate line.

## Constraints

$1<=T<=100$
$-10^{\wedge} 4<=A, B<=10^{\wedge} 4$
$1<=\mathrm{N}<=1000$

## Example

## Input:

3
375
216
443
Output:
55
-3
12
