## Find The Determinant

In this problem you have to calculate the determinant of an $\mathrm{N} \times \mathrm{N}$ matrix whose entries are given by $\boldsymbol{m}[i][j]=\operatorname{gcd}(\mathbf{i}, \mathrm{j}), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{N}$.

Here $\operatorname{gcd}(i, j)$ denotes the greatest common divisor of $i$ and $j$.
As the determinant $D$ can grow very large, you have to print $\mathrm{D} \% 1000003$.

## Input

First line of input consists of a single integer containing the number of test cases T ( equal to around 500000), each of the following $T$ lines contain an integer N the size of the matrix. N lies between 1 and 2000000 ( both inclusive ).

## Output

One line corresponding to each test case containing the determinant modulo 1000003 for the corresponding test case.

## Example

## Input:

3
1
3
5

## Output:

1
2
16
