

Favorite Dice

BuggyD loves to carry his favorite die around. Perhaps you wonder why it's his favorite? Well, his die is magical and can be transformed into an N -sided unbiased die with the push of a button. Now BuggyD wants to learn more about his die, so he raises a question:

What is the expected number of throws of his die while it has N sides so that each number is rolled at least once?

Input

The first line of the input contains an integer t , the number of test cases. t test cases follow.

Each test case consists of a single line containing a single integer N ($1 \leq N \leq 1000$) - the number of sides on BuggyD's die.

Output

For each test case, print one line containing the expected number of times BuggyD needs to throw his N -sided die so that each number appears at least once. The expected number must be accurate to 2 decimal digits.

Example

Input:

2
1
12

Output:

1.00
37.24
