

# Palindrome or not

A **palindrome** is a word, phrase, number, or other sequence of units that can be read the same way in either direction, with general allowances for adjustments to punctuation and word dividers

for eg., HELLOLLEH is a Palindrome string,

and 123456789 is not a Palindrome number.

## Input

t - number of testcases [ t < 1000 ].

On each of the next t lines given string.

## Output

For each next t lines output the dataset number as a decimal integer (start counting at one), a space and "YES" if the given input is palindrome, or "NO" if the input is not.

## Example

### Input:

```
2
HELlollEH
ILOVEyou
```

### Output:

```
1 "YES"
2 "NO"
```
